MOROCCAN AUTOMOTIVE TECHNOLOGIES

Automotive Industry

The automotive sector in Morocco has become one of the main engines of the development of its economy by the rank of first export sector that it has acquired after the establishment of manufacturers Renault and PSA with their international suppliers.

As for the sales of vehicles on the domestic market, they have recorded a clear growth in the last decade reaching 100,000 units per year, indicating the dynamism of professionals as well as brand agents and credit companies, which have facilitated their acquisition by the Moroccan consumer whose vehicle has become essential both professionally and personally.

Thus a consequent park was constituted bordering the 4 million vehicles ensuring mobility of the people and the goods in our country the maintenance and the repair of the aforementioned park requires the intervention of several hundreds of SME and TPE, which are the manufacturers, the importers and the distributors of the spare parts as well as the workshops of repair, it employs several thousands of frameworks, technician, agent and trainees, carrying out a commonly called SAV or After-market.

To highlight the technological complexity of this branch which calls for several trades and disciplines rallying the embedded electronics, mechanics, chemistry and thermics ..., to business models ranging from the family VSE to the multinational through franchises, is the purpose of the M.A.T 2022, that GIPAM organizes in collaboration with its institutional partners.

PRODUCT

Parts and Components

- Engine and mechanical systems
- Gearboxes, exhaust, axles
- Electrical & Electronic Systems
- Radiators & Cooling Systems
- On-board electronics
- Battery
